

STURTEVANT Lynx

The Lynx vacuum cleaner is both compact and extremely manoeuvrable. Designed for a single operator hose of up to 50mm bore and 12m in length, the Lynx offers a generous 35-litre collection-bin capacity. This makes the unit suitable for duties ranging from floor sweeping to sump emptying. Typical cleaning applications include offices, factories, computing facilities and vehicles.

Fitted with a 1000W by-pass vacuum motor, the Lynx can be specified for either 240V or 110V electrical supplies. Fitted with a pushing handle and wheeled base, it has a footprint just 460mm wide and 510mm long allowing it to pass through narrow doorways and aisles.

Filtration – Micro-porous polyester needelfelt filter with sealing ring and cage. This can be changed for an optional mesh screen and cut-off float valve, converting the unit into an effective vacuum cleaner for liquids such as detergent or oil. An integral drain plug simplifies emptying of the collection bin when used with liquids.

Accessories – As standard, the Lynx is supplied with either an adjustable front floor-nozzle and short connecting hose (*fig.a*) or a longer hose and toolkit (*fig.b*).

Diverse applications – Where space is restricted, or mobility is less important, the Lynx can be specified without handle or wheels. This configuration is well suited to dust extraction from machine tools, chimney sweeping and boiler cleaning.
